DETAILED ACTION

1. This communication is in response to amendment filed 6/6/08.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Att. Daniel Wasil (Reg. 45303) on 9/15/08.

The application has been amended as follows:

Please amend the abstract as follows:

ABSTRACT

An automated teller machine (ATM) (10) includes an input device (16) a card reader (20), a cash dispenser (24), and an output device (18). The ATM is operative to read account information from a card with the card reader and validate a user PIN input through the input device. The ATM is also operative to dispense cash with the cash

Art Unit: 3693

dispenser and dispense digital content with the output device responsive to user input selections. The ATM is further operative to charge a user fee to an account associated with the card for the dispense of cash and digital content. The digital content may be acquired by the ATM from a digital information source on the Internet or other network. Licensing fees associated with the dispense of the digital files may be transferred to a source or licensing entity associated with the digital content.

Response to Amendment

2. Pending claims 2-6,8-54 and 56-94 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The claimed inventions pertain to an automated transaction machine and process associated with an

Art Unit: 3693

automated transaction machine operative to dispense cash and digital content based upon the users inputs.

The following prior art references have been deemed most relevant to the allowed claim(s):

Prior art references Peters et al. (WO 95/30212) (PETERS), NPL reference, Bank Network News ("Internet Technology Pushes New Services to ATMs (Canadian Imperial bank of Commerce (Toronto) will test Internet-type technology to tailor ATM offerings to the need of cardholders"), v 15, n 22, p.7, 4/11/97 ("BNN") and Lu et al. US Pat. 6035336 (LU).

None of the references teach or suggest a cash dispensing machine that can output a network-downloaded digital sound recording file to a portable computing device of a machine user.

In Peters's operation (page 39) a customer can either purchase a tangible product (e.g., compact disc) or "merely use the vending machine as an entertainment device" to play music. Peters' products dispensed during purchase are manually restocked (page 27, lines 1-4; page 48, lines 13-15).

Peters does not teach or suggest the ability to dispense currency responsive to a cash withdrawal request. Nor does Peters' vending machine have the structural ability to receive a cash withdrawal request or to dispense cash corresponding to such request.
